

# LaTeX – Use of math symbols and equations

## Superscript and subscript

How to display subscripts and superscripts, indexes and exponents:

Subscripts:

- `a_i` gives  $a_i$
- `b_{ij}` gives  $b_{ij}$
- `C_{m,n}` gives  $C_{m,n}$
- `\delta_{j+k}` gives  $\delta_{j+k}$

Superscripts:

- `x^y` gives  $x^y$
- `a^{j2\pi}` gives  $a^{j2\pi}$
- `x^2_3` gives  $x^2_3$
- `C^k_{\mu,\nu}` gives  $C^k_{\mu,\nu}$

Composition with preceding indexes: `{_1^2 \Psi_3^4}` gives  ${}_1^2\Psi_3^4$

## Underlines, overlines and stackings

Includes vectors

`\hat a \ \ \bar b \ \ \vec c`

$\hat a \ \bar b \ \vec c$

`\overrightarrow{a b} \ \ \overleftarrow{c d} \ \ \widehat{d e f}`

$\overrightarrow{ab} \ \overleftarrow{cd} \ \widehat{def}$

`\overline{g h i} \ \ \underline{j k l}`

$\overline{ghi} \ \underline{jkl}$

`\overbrace{1+2+\cdots+100}^{5050}`

$\overbrace{1+2+\cdots+100}^{5050}$

`\underbrace{a+b+\cdots+z}_{26}`

$$\underbrace{a + b + \cdots + z}_{26}$$

$$A \xleftarrow{n+\mu-1} B \xrightarrow[T]{n\pm i-1} C$$

$$A \xleftarrow{n+\mu-1} B \xrightarrow[T]{n\pm i-1} C$$

$$\overset{\alpha}{\underset{\beta}{\omega}} \overset{\zeta}{\underset{\eta}{\tau}} \overset{\Delta}{\underset{\tau}{\Delta}} \overset{\mu}{\underset{\nu}{\Delta}} \overset{\nu}{\underset{\mu}{\Delta}} \overset{\eta}{\underset{\zeta}{\tau}} \overset{\tau}{\underset{\eta}{\zeta}} \overset{\zeta}{\underset{\tau}{\eta}} \overset{\eta}{\underset{\zeta}{\tau}} \overset{\tau}{\underset{\eta}{\zeta}} \overset{\zeta}{\underset{\tau}{\eta}} \overset{\eta}{\underset{\zeta}{\tau}}$$

$$\overset{\alpha}{\underset{\beta}{\omega}} \overset{\zeta}{\underset{\eta}{\tau}} \overset{\Delta}{\underset{\tau}{\Delta}} \overset{\mu}{\underset{\nu}{\Delta}} \overset{\nu}{\underset{\mu}{\Delta}} \overset{\eta}{\underset{\zeta}{\tau}} \overset{\tau}{\underset{\eta}{\zeta}} \overset{\zeta}{\underset{\tau}{\eta}} \overset{\eta}{\underset{\zeta}{\tau}} \overset{\tau}{\underset{\eta}{\zeta}} \overset{\zeta}{\underset{\tau}{\eta}} \overset{\eta}{\underset{\zeta}{\tau}}$$

.

## Sets

Sets operations and related symbols.

$$\text{\texttt{\textbackslash in}} \text{\texttt{\textbackslash ni}} \text{\texttt{\textbackslash notin}} \text{\texttt{\textbackslash varnothing}} \text{\texttt{\textbackslash complement}}$$

$$\in \ni \not\in \emptyset \complement$$

$$\text{\texttt{\textbackslash subset}} \text{\texttt{\textbackslash subseteq}} \text{\texttt{\textbackslash subsetneq}} \text{\texttt{\textbackslash supset}} \text{\texttt{\textbackslash supseteq}} \text{\texttt{\textbackslash supsetneq}}$$

$$\subset \subseteq \subsetneq \supset \supseteq \supsetneq$$

$$\text{\texttt{\textbackslash cap}} \text{\texttt{\textbackslash bigcap}} \text{\texttt{\textbackslash cup}} \text{\texttt{\textbackslash bigcup}}$$

$$\cap \bigcap \cup \bigcup$$

$$\text{\texttt{\textbackslash ell}} \text{\texttt{\textbackslash mho}} \text{\texttt{\textbackslash Finv}} \text{\texttt{\textbackslash Re}} \text{\texttt{\textbackslash Im}} \text{\texttt{\textbackslash wp}}$$

$$\ell \cup \cap \Re \Im \wp$$

Others – examples using the calligraphic font (`\cal`) and the Greek font for designating sets:

$$\{\text{\texttt{\textbackslash cal A}}\} \text{\texttt{\textbackslash setminus}} \{\text{\texttt{\textbackslash cal B}}\} \text{ gives } \mathcal{A} \setminus \mathcal{B}$$

$$\text{\texttt{\textbackslash Omega}} \text{\texttt{\textbackslash smallsetminus}} \text{\texttt{\textbackslash omega}} \text{ gives } \Omega \setminus \omega$$

.

## Logic

Logical operators and relations:

$$\text{\texttt{\textbackslash forall}} \text{\texttt{\textbackslash exists}} \text{\texttt{\textbackslash nexists}} \text{\texttt{\textbackslash bar\{A\}}} \text{\texttt{\textbackslash mid}}$$

$$\forall \exists \nexists \bar{A} \mid$$

$$\text{\texttt{\textbackslash And}} \text{\texttt{\textbackslash wedge}} \text{\texttt{\textbackslash vee}} \text{\texttt{\textbackslash neg}} \text{\texttt{\textbackslash to}} \text{\texttt{\textbackslash gets}} \text{\texttt{\textbackslash iff}}$$

$$\& \wedge \vee \neg \rightarrow \leftarrow \iff$$

$$\text{\texttt{\textbackslash bigwedge}} \text{\texttt{\textbackslash bigvee}} \text{\texttt{\textbackslash diamond}} \text{\texttt{\textbackslash lozenge}}$$

$$\bigwedge \bigvee \diamond \lozenge$$

$$\text{\texttt{\textbackslash vdash}} \text{\texttt{\textbackslash Vdash}} \text{\texttt{\textbackslash vDash}} \text{\texttt{\textbackslash Vvdash}} \text{\texttt{\textbackslash models}} \text{\texttt{\textbackslash dashv}}$$

$$\vdash \Vdash \vDash \Vvdash \models \dashv$$

Examples:

- `\forall p,q \text{\texttt{\textbackslash}}, \text{\texttt{\textbackslash exists}} q \text{\texttt{\textbackslash mid}} \text{\texttt{\textbackslash bar\{q\}}} \text{\texttt{\textbackslash to}} p` gives  $\forall p, q \exists q \mid \bar{q} \rightarrow p$

- `\bigwedge_{x \in A}` gives  $\bigwedge_{x \in A}$
- `\bigwedge \limits_{x \notin A}` gives  $\bigwedge_{x \notin A}$
- `\bar{A} \vee B = \bar{A} \wedge \bar{B}` gives  $A \bar{\vee} B = \bar{A} \wedge \bar{B}$
- `A \iff B = A \to B \wedge A \leftarrow B` gives  $A \iff B = A \rightarrow B \wedge A \leftarrow B$
- `\bigcap \limits_{i=1}^n \bigcup \limits_{j=1}^n \{\mathcal{B}\}_{i,j}` gives  $\bigcap_{i=1}^n \bigcup_{j=1}^n \mathcal{B}_{i,j}$

Obs – the statement `\limits` shown in the examples above puts the indexes exactly above and / or below the symbol. In the first example, `\_` is used to put an extra space. .

## Operators

Several types of operators:

`+ \oplus \bigoplus \pm \mp -`

$+ \oplus \bigoplus \pm \mp -$

`\times \otimes \bigotimes \cdot \circ \bullet \bigodot`

$\times \otimes \bigotimes \cdot \circ \bullet \bigodot$

`\star * / \div \frac{1}{2}`

$\star * / \div \frac{1}{2}$

`\sqrt{2} \sqrt[n]{x}`

$\sqrt{2} \sqrt[n]{x}$

`\nabla \partial x \dot{x} \ddot{y}`

$\nabla \partial x \dot{x} \ddot{y}$

Examples:

- `\rho = \sqrt{x^2 + y^2}` gives  $\rho = \sqrt{x^2 + y^2}$
- `\nabla \phi(x,y) = \frac{\partial \phi}{\partial x} + \frac{\partial \phi}{\partial y}` gives  $\nabla \phi(x,y) = \frac{\partial \phi}{\partial x} + \frac{\partial \phi}{\partial y}$
- `\nabla^2 \phi(x,y) = \frac{\partial^2 \phi}{\partial x^2} + \frac{\partial^2 \phi}{\partial y^2}` gives  $\nabla^2 \phi(x,y) = \frac{\partial^2 \phi}{\partial x^2} + \frac{\partial^2 \phi}{\partial y^2}$
- `\frac{\partial^2 \phi}{\partial x \partial y} = \frac{\partial^2 \phi}{\partial y \partial x}` gives  $\frac{\partial^2 \phi}{\partial x \partial y} = \frac{\partial^2 \phi}{\partial y \partial x}$

## Relations and definitions

To specify relations, mappings and definitions

`\sim \approx \simeq \cong \dot{=}`

$\sim \approx \simeq \cong \dot{=}$

`< > \leq \geq \ll \gg`

$< > \leq \geq \ll \gg$

`\lessgtr \lesseqgtr \lesseqqgtr`

$\lesseqgtr \lesseqqgtr$

`\equiv \not\equiv \neq \propto`

$\equiv \neq \propto$

`\mapsto \longmapsto`

$\mapsto \longmapsto$

.

## Geometric

Geometric symbols

`\circ \bigcirc \Diamond \Box \triangle`

$\circ \bigcirc \Diamond \Box \triangle$

`\vartriangle \triangledown \triangleleft \triangleright \vartriangleright \vartriangleleft`

$\vartriangle \triangledown \triangleleft \triangleright \vartriangleright \vartriangleleft$

`\angle \sphericalangle \measuredangle 45^\circ`

$\angle \sphericalangle \measuredangle 45^\circ$

`\perp \mid \nmid \parallel \asymp \parallel`

$\perp \mid \nmid \parallel \asymp \parallel$

.

## Arrows

Some more frequent types of arrows (there are many more – see in [Wikipedia article](#))

`\leftarrow \rightarrow \leftrightarrow \Leftrightarrow \Leftarrow \Rightarrow \Leftrightarrow`

$\leftarrow \rightarrow \leftrightarrow \Leftrightarrow \Leftarrow \Rightarrow \Leftrightarrow$

`\leftarrow \gets \rightarrow \to \not\to \leftrightarrow \longleftarrow \longrightarrow`

$\leftarrow \gets \rightarrow \to \not\to \leftrightarrow \longleftarrow \longrightarrow$

`\rightleftharpoons \leftleftarrows \leftrightarrows \Lleftarrow \leftarrowtail`

$\rightleftharpoons \leftleftarrows \leftrightarrows \Lleftarrow \leftarrowtail$

`\uparrow \downarrow \updownarrow \Uparrow \Downarrow \Updownarrow`

$\uparrow \downarrow \updownarrow \Uparrow \Downarrow \Updownarrow$

.

## Special symbols

Some special symbols. There are many more in [Wikipedia article](#)

`\S \P \% \dagger \ddagger \ldots \cdots`

$\S \P \% \dagger \ddagger \ldots \cdots$

`\smile \frown \wr \triangleleft \triangleright \infty \bot \top`

$\smile \frown \wr \triangleleft \triangleright \infty \bot \top$

`\imath \hbar \jmath \mathfrak{surd} \ast \amalg \therefore \backepsilon \sharp`

$$i\hbar\gamma\sqrt{*}\Pi\therefore\varnothing\sharp$$

.

# Summations, Integrals and Products

Several cases, including limits, sequences and series. Notice in the examples below that when you want to put the limits with the same vertical alignment of the math symbol, you must use the **\limits** declaration. Otherwise, the limits will be put ahead of the symbol.

**\lim \limits\_{n \to \infty} x\_n**

$$\lim_{n \rightarrow \infty} x_n$$

**\lim \_{n \to \infty} x\_n**

$$\lim_{n \rightarrow \infty} x_n$$

**\sum\_{k=1}^N k^2**

$$\sum_{k=1}^N k^2$$

**\sum \limits\_{k=1}^N k^2**

$$\sum_{k=1}^N k^2$$

**\prod\_{i=1}^N x\_i**

$$\prod_{i=1}^N x_i$$

**\prod \limits\_{i=1}^N x\_i**

$$\prod_{i=1}^N x_i$$

**\coprod\_{i=1}^N x\_i**

$$\coprod_{i=1}^N x_i$$

**\coprod \limits\_{i=1}^N x\_i**

$$\coprod_{i=1}^N x_i$$

**\int\_{-N}^N e^x \, dx**

$$\int_{-N}^N e^x \, dx$$

**\int \limits\_{-N}^N e^x \, dx**

$$\int_{-N}^N e^x \, dx$$

**\iint\_D \, dx \, dy**

$$\iint_D \, dx \, dy$$

**\iiint\_E \, dx \, dy \, dz**

$$\iiint_E \, dx \, dy \, dz$$

`\iiint_{F}^{\text{U}} \, dx \, dy \, dz \, dt`

$$\iiint_F^U dx \, dy \, dz \, dt$$

`\oint_C x^3 \, dx + 4y^2 \, dy`

$$\oint_C x^3 \, dx + 4y^2 \, dy$$

Obs – the declaration `\,` in the above integrals puts extra spaces between consecutive letters. See more about alignment on this post : [LaTeX – Fine-tunning and some extras](#).

.

## Binomials

---

Binomials only. For matrices, see next post.

`\binom{n}{p} = \frac{n!}{p!(n-p)!}`

$$\binom{n}{p} = \frac{n!}{p!(n-p)!}$$
